

INFRARED THERMOGRAPHY FOR MARINE SURVEYS

- Accurate Results
- Cost Effective
- Non-Destructive
- Annual PM

For the first time, marine surveyors can use the same revolutionary technology previously available only to the U.S. Navy. The new FLIR ThermaCAM FirstMate infrared camera is a best-in-class, state-of-the-art diagnostic tool to quickly and accurately perform all four "Elements of the Marine Survey," as cited by the Society of Marine Surveyors, Inc. (SAMS®) - including Pre-Purchase Surveys, Insurance Surveys, Appraisal Inspections, and Damage Inspections.

Since the first ship went to sea, marine surveyors have relied heavily on what they could see, hear, and felt to assess its seaworthiness and condition. Now the rugged FLIR ThermaCAM FirstMate infrared camera can be added to the marine surveyor's toolkit, along with the percussion hammer, a moisture meter ... and hands-on field experience. The FLIR ThermaCAM FirstMate's sensitive infrared detector and advanced electronics enable marine surveyors to instantly scan the structural integrity of any vessel, as well as electrical, propulsion, and fuel systems, as well as navigation and other on-board electronics and find problems that are invisible and otherwise difficult or impossible to detect.

Shipboard electrical, mechanical, propulsion, and power generating systems often emit an abnormal heat signature before they fail. Structural problems in FRP, wood, and composite laminates are clearly visible to the FirstMate. Finding these problems enables a proactive maintenance plan that will avoid catastrophic failures underway.

The ultra lightweight, awarding-winning ThermaCAM FirstMate is a powerhouse of sophistication. It weighs only as much as a flashlight, yet can store over 100 images on board, ready to download at the click of a mouse to a PC.

Augment your professional value! For more information about the product named above, please see the materials listed at the right of the previous page. To discuss your specific application requirements contact Building Diagnostics Group today.
